The Revenant. English. The Revenant, known as Ice Team 3 in the United States and Russia, is a survival thriller film directed by Alejandro Inarritu and written by director of Birdman and The Revenant.
Diferença se verifica ou não? Adjuvant chemotherapy for colorectal cancer with oxaliplatin or with irinotecan. Treatment with adjuvant chemotherapy following curative surgery reduces the incidence of recurrent disease in patients with stage III colon cancer. The currently recommended regimens for adjuvant chemotherapy for stage III disease include a combination of 5-fluorouracil, levamisole and oxaliplatin (FOLFOX) or irinotecan, leucovorin, and 5-fluorouracil (IFL). The relative merits of the two regimens are controversial. To compare the effectiveness and toxicity of the regimens and to identify patients who would benefit from adjuvant treatment. Randomised controlled trials were identified from the computerised bibliographic databases. Studies were included in the meta-analysis if they compared adjuvant chemotherapy for colorectal cancer with either FOLFOX or IFL. Patients were identified by searching Medline, Index Medicus and the Cochrane Library. The data extracted from each study were: study design; method of randomisation; patient characteristics; treatment details; and the number of patients who had recurrent disease, the number who died of disease, the incidence of toxic effects, and overall survival. Data from four randomised trials were identified, which included 1201 patients. Survival data were obtained from three studies. Patients in the FOL 2092c491b
