Disposable absorbent articles such as adult incontinence articles, diapers, and feminine hygiene products are designed to absorb and contain body exudates. These articles can be single-use or multi-use articles. For example, urine absorbing articles are

worn only once and are then discarded. Adult incontinence articles are worn all day and night and are then discarded. Adult diapers are worn all day and night and may be changed several times during the course of a day or night. Fecal absorbing articles are worn all day and night and are then discarded. An important characteristic of disposable absorbent articles is that they are designed to contain discharged body exudates. Thus, it is advantageous for these articles to have good body fluid barrier properties. Another important characteristic of disposable absorbent articles is that they should be soft, comfortable, and resilient. These characteristics are particularly important for disposable absorbent articles, such as adult incontinence articles and diapers, that are worn next to the body of the wearer. The use of apertures in disposable absorbent articles is known. U.S. Pat. No. 4,684,558, issued to Meyer et al. on Aug. 4, 1987, describes a disposable diaper having an apertured topsheet comprising a top film having a multiplicity of apertures extending therethrough, the apertures being formed
