Even though Photoshop is a powerful tool, there's a little more to creating a good image than just opening Photoshop and creating a masterpiece. Here are seven ways to create your own stunning images. Get into Photoshop. First thing's first: open Photoshop and play around with the various tools. Experiment with the tools, resize the image and change the image type and size, etc. This is often the best way to practice and learn. Learn the tools and how to interact with the various image types before taking on any real projects. The most important tip for new users is that Photoshop is easy, but it is critical to master each tool. Learning how to use each tool takes time and often the feeling of wasted time is what keeps users from creating and learning a useful image editing program. You can also use a text editor or even just a word processor to create images. However, once an image is created in Photoshop, it

is much easier to use the finished product. Learn the layer system. If you're starting out, you'll usually get the most out of your efforts by using a basic image with Photoshop and then building on that image. But don't stop there: go as far as you can with each image. Understanding the layers in Photoshop is the best way to get the most from your image editing. With layers, you can put a filter over another filter, change the hue, saturation and lighting, add an effect such as a text overlay, make a whole new background or replace an image. You can download image tutorials that teach you how to use Photoshop's layers, but once you're starting to understand how layers work, there's no need to use anything else. Learn how to use the various tools. The tools in Photoshop are the workhorse of your work. As you learn the tools and how they function, you'll begin to see ways to use the tools to manipulate your images. The basic tools in Photoshop include the following: -The Lasso tool. The Lasso tool can be used to isolate a part of your image and delete it, draw freehand shapes, etc. The Lasso tool is easy to use. -The Marquee tool. The Marquee tool is used for cutting images out. It is used to draw around a portion of an image and delete it. -The Magnetic Lasso. The Magnetic Lasso is used to outline a portion

Tunable vesicle/polymer microcapsules for the encapsulation of hydrophilic drugs and its pH-responsive release. The materials used for the fabrication of controlled delivery systems (CDSs) have been focused on designing and fabricating the systems to encapsulate and release highly water-soluble or water-solubilizable compounds. On the contrary, the continuous efforts have been paid on the development of suitable materials for the encapsulation of the hydrophobic substances and the release of the encapsulated compounds to the desired sites. The majority of these materials are composed of at least two phases (i.e. water-soluble and oil-soluble phases), and their structures are limited, which do not provide the desired functions in the CDSs and are often not practical. Recently, the interface-based intelligent microcapsules, in which the interface is used as a stimulus-responsive element, have attracted a growing interest. Herein, the novel tunable pH-responsive and thermally-induced CDSs composed of Janus vesicles were developed as a shell to encapsulate the hydrophilic drugs (i.e. paclitaxel or 5-fluorouracil). At a pH below the isoelectric point of the shell, the shell collapsed and the drugs were released from the microcapsules. At a pH above the isoelectric point, the shell collapsed and the drugs remained in the core of the microcapsules. By tuning the proportion of the two water-soluble phases (i.e. TEMED and TPP) and the

pH in the interfacial self-assembled process, the microcapsules with different shell sizes and shell thicknesses were fabricated. These stable microcapsules were applied to the encapsulation of paclitaxel or 5-fluorouracil. The release of the drugs from the microcapsules exhibited a pH-dependent profile: the release of 5-fluorouracil increased from 20% to 50% at pH 11.5, and the drug was released at a very low rate from the microcapsules at pH 4.5. By contrast, the release of paclitaxel from the microcapsules exhibited only a 1.5-fold increase as pH increased from 5.0 to 6.5. As compared to the thermal treatment of the shell-forming solution, the application of thermal treatment was found to be a facile technique to form the shell of the microcaps

particularly of a heavy vehicle, such as a truck or a bus, comprising a seat body supported on a vehicle frame by a suspension mechanism and mounted on a frame on a vehicle floor via a pedestal, and a cover to be attached to the seat body and covering the open side of the seat body. As such a seat structure, there are known a seat structure in which the upper side of the seat body is covered with a seat cover comprising a seat cover upper surface and a seat cover lower surface, and a seat structure in which the seat body is covered with a seat cover (refer to JP-B-3488045 and JP-B-300090). In this type of conventional seat structure, when viewed from the vehicle interior, the upper side of the seat cover is made substantially flush with the upper side of the seat body. For example, in the case of a seat cover made of cloth, stitching failure tends to occur, depending on the position of the seat body.Thursday, September 11, 2010 Kinky Ribbed Cheeto-Cheddar Last week I tried making homemade cheese again. I haven't done so for the last few years because it's a bit of a pain. In the past I have had a favorite cheese from my local grocery store, so going to try making that again. Unfortunately the grocery store didn't have any Parmesan in stock or any other hard cheese. I went to making a Cheeto-Cheddar, which by the way is really great in the summer, but like all Cheetos this is good year-round. Also it's an easy recipe if you are short on time. I've never made homemade cheese before. I tried it once and it turned out to be the most gag-inducingly horrible thing I ever made in my life. I have never tried again since that day,
